

EXTROL®

ASME Commercial Expansion Tanks

3
Years

Turbulator

DeepDrawn

The Deep Drawn Difference.

Deep Drawn Construction

- Deep Drawing the domes doubles the strength of the steel.
- Half the welds vs. head & shell reducing potential leak paths.
- Integral diaphragm design features a unique hoop ring and groove configuration that securely locks together the diaphragm and domes.
- Industry's smallest footprint fits tight mechanical room spaces.
- In-line models feature end-mounted charging valve for easy air adjustments.

Patented Turbulator®

- Agitates incoming water to flush debris that can abrade the diaphragm.
- Helps extend the life of the tank.
- Featured in all diaphragm tank models.

ASME Hydronic Expansion Tanks

Typical Installation

Hydronic Expansion Tanks

Amtrol hydronic expansion tanks are for use in closed, non-potable hydronic heating and chilled water systems. Available in diaphragm, full acceptance and partial acceptance bladder designs, all Extrol expansion tanks are made at our ISO 9001: 2015 certified facility. ASME tanks meet all Section VIII, Division I standards and have an industry leading 3-year warranty.

AX Series Diaphragm Models Head & Shell Design AX-15(V) through AX-280(V)

- Industry's thickest diaphragm.
- Horizontal and vertical models are available with optional restraints.
- Factory pre-charge: 12 psig.
- Maximum operating temperature: 240° F.

L Series Full Acceptance Models 200-L through 1500L

- Replaceable, full acceptance bladder design.
- Industry's thickest heavy duty butyl bladder.
- Free-standing on integral, welded ring base.
- Factory pre-charge: 12 psig.
- Maximum operating temperature: 240° F.

LBC Series Partial Acceptance Models 35-LBC through 600-LBC

- Replaceable, partial acceptance bladder design.
- Industry's thickest heavy duty butyl bladder.
- Free-standing on integral, welded ring base.
- Factory pre-charge: 12 psig.
- Maximum operating temperature: 240° F.

Sizing Guide

Things You Must Know:

1. Total System Volume _____ gallons
2. Minimum System Temperature _____ °F
3. Maximum System Temperature _____ °F
4. Minimum Operating Pressure at Expansion Tank . . _____ psig
5. Maximum Operating Pressure at Expansion Tank . _____ psig

Selection of Expansion Tank:

6. Find and enter "Water Expansion Factor" _____ (see Table 1)
7. Amount of Expanded Water = Line (1) x Line (6) . . _____ gallons
8. Find and enter "Tank Acceptance Factor" _____ (see Table 2)
9. Minimum Volume = Line (7) ÷ Line (8) _____ gallons
10. Select an Expansion Tank that is at least equal to Line (9) for Tank Volume (gallons) and Line (7) for Max. Acceptance Volume (gallons). Multiple tanks may be required.

Table 1: Water Expansion Factor

Maximum System Temp.	Minimum System Temperature						
	40° F	50° F	60° F	70° F	80° F	90° F	100° F
60° F	.0005	.0049	—	—	—	—	—
