

PERFORMANCE DATA

To obtain Performance Data:

1. Press and hold the ▼ (Down) button.
2. While holding the ▼ (Down) button for 2 seconds, press and hold the "On/Off" button (hold both buttons simultaneously).

3. Use the ▲ (Up) and ▼ (Down) buttons to scroll to the desired performance information described below.

PARAMETER SETTINGS

To adjust the parameters:

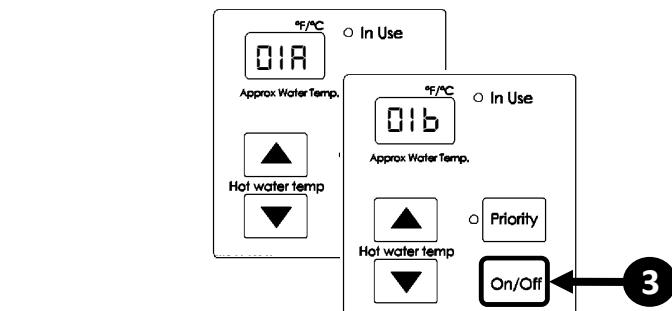

1. Press the "A" button for 1 second.

2. Use the ▲ (Up) and ▼ (Down) button on the controller to select a setting number (See Parameter Settings Table).

3. Once the desired setting number is selected, use the "On/Off" button on the controller to change the selection for the setting number. Example: Display will change from 01a to 01b for Maximum Temperature setting (as shown below).

4. To exit the parameters, press the "A" button on the PC board for 1 second.

Parameter Settings Table

Default is A for all settings below except I0, I2, I3, and I4 which are factory set.

SETTING #	SETTING DESCRIPTION	SELECTION					
		R	b	c	d	E	F
01	Maximum Set Temperature	Residential: 120°F Commercial: 140°F	Residential: 140°F Commercial: 185°F

14	Internal (Indoor)	External (Outdoor)					

¹ See section "Service Soon, 55" in the Installation and Operation Manual for more information.

² Setting 05 is available only if setting 04 b is selected.

Economy mode cycles the pump less often, using less energy to maintain the circulation loop temperature.

Comfort mode cycles the pump more frequently, ensuring the loop temperature remains higher (but also uses more energy).

³ BMS = Building Management System

⁴ Setting 09 is available only if setting 08 b is selected.

⁵ Selecting "High" will increase the water flow rate to the maximum capacity.

ELECTRICAL DIAGNOSTICS

NOTE: Wiring diagram is available in manual and on the inside front cover.

Important Safety Notes

There are a number of (live) tests required when performing electrical diagnostics on this product. Proceed with caution at all times to avoid contact with energized components inside the water heater. Only trained and qualified service technicians should attempt to repair this product. Before checking for resistance readings, disconnect the power source to the unit and isolate the item from the circuit (unplug it).

Freeze Protection

This unit has freeze protection heaters mounted at different points to protect the water heater from freezing. All of them should display a positive resistance reading.

Flame Rod

Place one lead of your meter to the flame rod and the other to ground. With the unit running you should read between 5 - 150 VAC. Set your meter to the micro (μ) amp scale and arrange meter leads in line with the flame rod. You should read 1 μ amp or greater for proper flame circuit. In the event of low flame circuit, remove the flame rod and check for carbon or damage.

Amp Fuses

This unit has two glass fuses located on the PC Board, one inline (10) amp and one (4) amp glass fuse. Remove the fuses and check continuity through it. If you have continuity through each fuse then it is functioning. Otherwise the fuse is blown and must be replaced.

Thermistors

Check all thermistors by inserting meter leads into each end of the thermistor plug. Set your meter to the 20 K scale and read resistance. Applying heat to the thermistor bulb should decrease the resistance. Applying ice to the thermistor bulb should increase the resistance.

Below are examples of typical temperatures and resistance readings.

Temperature	Resistance Readings
59°F	11.4 - 14KΩ
86°F	6.4 - 7.8KΩ
113°F	3.6 - 4.5KΩ
140°F	2.2 - 2.7KΩ
221°F	0.6 - 0.8KΩ

DIAGNOSTIC CODES

To display diagnostic codes:

1. Turn off the water heater by pressing the "On/Off" button.
2. Press and hold the "On/Off" for 2 seconds and then the ▲ (Up) button simultaneously.
3. The last 9 maintenance codes display and flash one after the other.
4. To exit diagnostic codes and return the water heater to normal operation, press and hold the "On/Off" button for 2 seconds and then the ▲ (Up) button simultaneously.
5. Turn on the water heater by pressing the "On/Off" button.
