

STIEBEL ELTRON

Simply the Best

Mini™ Series

THERMOSTATIC & MECHANICAL
POINT-OF-USE ELECTRIC TANKLESS
FOR HANDWASHING

- › Robust, trouble-free, & proven Direct Coil™ Heating Technology
- › Self-cleaning element resists limescale
- › Unlimited supply of warm water
- › Compact design can be mounted above or below fixture with fittings pointing up or down
- › Dry-fire prevention and high limit manual reset

ISO 9001
CERTIFIED

Tested and certified by WQA against NSF/ANSI/CAN 372 for lead free compliance.

Small & Reliable Water Heating for Handwashing

Simple and easy to install

Mini™ water heaters can be located above or below the fixture with water connections pointing up or down. No pressure relief valve, drains, or circulating pumps are needed.

Industry-leading dry-fire protection

Flow switch control ensures a Mini™ will not dry-fire. Additionally, all Mini™ water heaters are equipped with a safety high-limit with manual reset for the utmost in safety. The combination of meticulous German engineering and the best available materials ensures that every Mini™ is the highest quality. Nobody can compare with our exceptional reliability record and customer support services!

Liming-resistant Direct Coil™ Technology

The Mini™ was the first of our tankless water heaters in the U.S. and Canada to feature our Direct Coil™ heating system. The efficient nichrome heating elements contained in the glass-fiber reinforced heating chamber are designed to silently vibrate on each start-up. This self-cleaning action confers superior limescale resistance and increased longevity. Designed for many years of trouble-free service, installation after installation has proven the Mini™ has the lowest failure rates of any tankless water heater in the industry.

Thermostatic Mini™-E Models

Mini™-E thermostatic water heaters are electronically controlled versions of our famous mechanical Mini™ water heaters.

The thermostatic electronic control gives them additional features beyond the capabilities of the mechanical Mini™ models.

Code-compliant warm water output

The electronic control board in conjunction with an automatic flow rate control allows Mini™-E models to maintain an accurate outlet water temperature, even with pressure fluctuations in the water supply. This makes them eligible for installation where output temperatures must be limited by code.

Adjustable output temperatures

Mini™-E models are factory set to deliver water at 100 °F (38 °C), but can be field adjusted to a different temperature by the installer and secured to the new setting.

Multiple sink capability

Mini™-E models 6-2 and 6-3 can be plumbed to supply warm water for hand washing to two sinks in warm climates.

Booster capability

Because the Mini™-E accepts incoming water up to 122 °F (50 °C), it's a perfect booster for a sink far from the main hot water source. It will supply warm water almost immediately and will shut off once hot water arrives from the remote source and the boost is no longer needed. Its small size can be an asset for installation.

103 years leakage/

Mini™ 2-1 is internally restricted to 0.32 GPM / 1.2 l/min. Mini™-E 2-1 is internally restricted to 0.40 GPM / 1.5 l/min.

Mini™ 2-1, 2.5-1, 3-1 & Mini™-E 2-1, 3-1 ship with a 0.5 GPM pressure compensating flow-reducer/aerator that must be installed.

Mini™ 3.5-1, 4-2 & Mini™-E 4-2 ship with a 0.66 GPM pressure compensating flow-reducer/aerator that must be installed.

Mini™ 6-2 ships with a 1.0 GPM pressure compensating flow-reducer/aerator that must be installed.

Mini™-E 6-2 ships with two 0.5 GPM pressure compensating flow-reducer/aerators that must be installed, plus an additional 1.0 GPM pressure compensating flow-reducer/aerator for use if plumbed to 1 sink.

¹ Nominal mains voltage is 110-120V and 220-240V.

² This is our recommendation for overcurrent protection sized at 100% of load. Check local codes for compliance if necessary. Tankless water heaters are considered a non-continuous load.

³ Copper must be used. Conductors should be sized to maintain a voltage drop of less than 3% under load.

⁴ Mechanical units suitable for supply with cold water only. Thermostatic units can accept inlet water of 122°F.
